ODM

(Original Design Manufacturer)

We supply the production method in which to provide all services from R&D, design to production and post-maintenance, and customer is responsible for sales.

The purchaser usually also authorizes its brand, allowing the manufacturer to produce products with that brand. After a manufacturer designs a product, or slightly modifying some designs (such as button positions) To produce. The biggest advantage of this is that other manufacturers reduce their own development time.

PACKAGING DESIGN

Packaging design is the connection of form, structure, materials, color, imagery, typography, and regulatory information with ancillary design elements to make a product suitable for marketing.

Its primary objective is to create a vehicle that serves to contain, protect, transport, dispense, store, identify, and distinguish a product in the marketplace. Ultimately, the goal of a packaging design is to meet marketing objectives by distinctively communicating a consumer product's personality or function and generating a sale.
